

# BG7 Finalproject report

開啟 cmsimfly

找到 checklogin

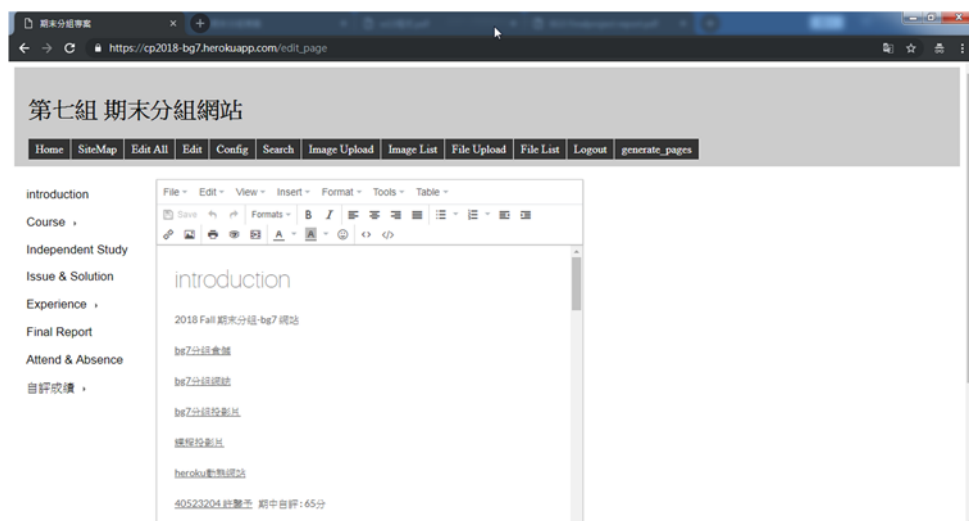

## 寫下程式

```
elif password == "bg7":  
    return redirect('/helloworld')  
return redirect('/')
```

```
@app.route('/helloworld')  
def show_helloworld():  
    return "hello world"
```

```
1 @app.route('/checkLogin', methods=['POST'])  
2 def checkLogin():  
3     """Check user login process."""  
4     password = request.form["password"]  
5     site_title, saved_password = parse_config()  
6     hashed_password = hashlib.sha512(password.encode('utf-8')).hexdigest()  
7     if hashed_password == saved_password:  
8         session['admin'] = 1  
9         return redirect('/edit_page')  
10    elif password == "bg7":  
11        return redirect('/holleworld')  
12    return redirect('/')  
13  
14 @app.route('/holleworld')  
15 def show_helloworld():  
16    return "<p>hello world</p>"
```

我們讓 `session['admin'] = 1`，密碼打 `admin`，程式執行時判斷 `admin` 變數等於 1，則可以登入極管理網頁。

```
elif password == "bg7":  
    return redirect('/helloworld')
```

當輸入密碼是 **bg7**，登入頁面導向('/'括弧內的字，這裏我們設定成 **helloworld**
